

Tom, this is your
ancestry report

SAMPLE REPORT

Introduction

This Ancestry Report indicates your anthropological roots. We compare your genetic map with a vast database of DNA markers from countless locations around the world.

Thanks to the genetics inherited from your ancestors, our scientists can determine which geographical areas and countries of the world you descend from.

This test is performed on Autosomal DNA, which provides us with the genealogical information on both one's father and mother, inherited, in turn, from previous generations, dating back hundreds or even thousands of years.

There are different methodologies to calculate ancestral roots, providing different results. We use what we believe are the best algorithms; though they may get some details wrong, they are quite accurate with regards to the basics.

The data presented in this report are only statistical approximations. However, thanks to our test, featuring 700,000 genetic markers, we can achieve a great level of detail.
